

**Special session****Deadline: 15 May 2020****Title:****Sustainable and green supply chain management of the 21<sup>st</sup> century****Organised by (names, affiliations and emails)**

*Jamal El Baz:* Equipe de recherche en économie de transport technologie d'informations et logistique (ERETTLOG), Ibn Zohr University, email : [j.elbaz@uiz.ac.ma](mailto:j.elbaz@uiz.ac.ma),

*Salomé Ruel:* Centre d'études et de recherche en gestion appliquée (CERAG), La Rochelle Business School, email : [ruelsa@esc-larochelle.fr](mailto:ruelsa@esc-larochelle.fr),

**Abstract:**

This special track aims to extend the angles of sustainable and green supply chain management. The recent world events show clearly the growing pressure to meet triple bottom lines requirements of social, environmental and economic performance for private and public companies.

Practices of companies to address these issues can involve alternative use of energy, upgrading their infrastructure, reengineering supply chain processes, reporting and other green actions. The technological advancements contribute to make supply chains more sustainable and companies conform to SSCM/GSCM.

**List of topics:**

Topics of interest include:

- Green logistics, reverse logistics and green actions in manufacturing and other industries including services and public companies;
- Social responsible supply chain practices;
- Digitalization and GSCM, technologies, concepts and practices;
- Technological applications related to GSCM and SSCM;
- Collaboration within SC for SSCM and GSCM practices;
- Sustainable manufacturing practices, additive manufacturing;

- Green procurement, green purchasing;
- Green transportation, practices of third party logistics;
- Eco-design, conceptualization of green supply chain networks

**Keywords:**

Green supply chain management, sustainable supply chain management, green manufacturing, digitalization
